

Svelte component task

Your task is to create a Svelte component. The component should be an Airbnb style map.

See here for an example: <https://www.airbnb.com/s/Copenhagen--Denmark/homes>

It should match as closely as possible with the reference, including adapting to screen size, clickable markers, ability to see a carousel. Please note that on mobile screen the map disappears completely.

To get started please unzip the attached zip file. The file `+page.svelte` in `src/routes` has a div where the map should be placed and also has a grid of listings (the part on the left).

The map should be based on Openstreetmap and not on Google Maps.

To the extent possible, the component should make use of Flowbite-Svelte (<https://flowbite-svelte.com/>) and tailwind-css which is included in the repo.

You can consider adding tests as well.
